 - End to end coverage across different areas of software development
- **Flexible Approach**
 - Flexible engagement approach customized for your business
- **Strong Team**
 - Strong development team that can quickly adapt to new environment and projects

CASE STUDIES

MID-SIZED FINANCIAL CLIENT – MOBILE POS APPLICATIONS

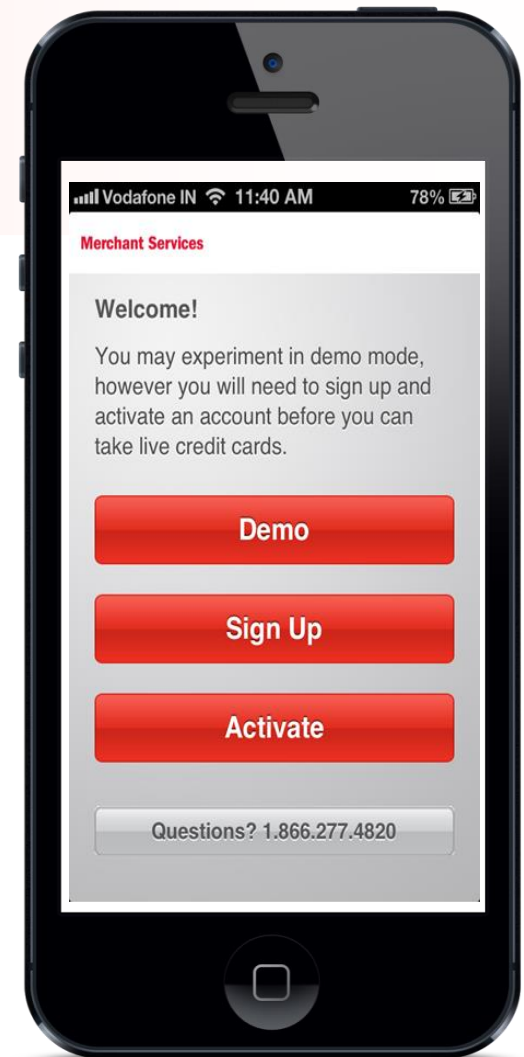

Financial client with Mobile Payments Applications was struggling to deliver high quality products to its customers. Their development and QA process was quite immature with no artifacts or documents.

TechMileage Solutions and Work

TechMileage performed an initial assessment and proposed a series of steps to improve the situation. The applications with following features were completed in a period of 12+ months:

- PCI compliant Mobile POS Application accepts credit card payments
- Provides an interface to swipe the credit cards
- Provides services pertaining to payment market
- Built in IOS and Android Platforms
- Uses peripherals like Rambler and Unimag to accept the card swipe.
- Branded for different merchant service providers

Product **quality increased significantly** and defects were drastically reduced. The client was able to **acquire major banking customers** leading to a significant increase in business.

MID-SIZED LOGISTICS CLIENT – TRACKING AND DISPATCH APPLICATION

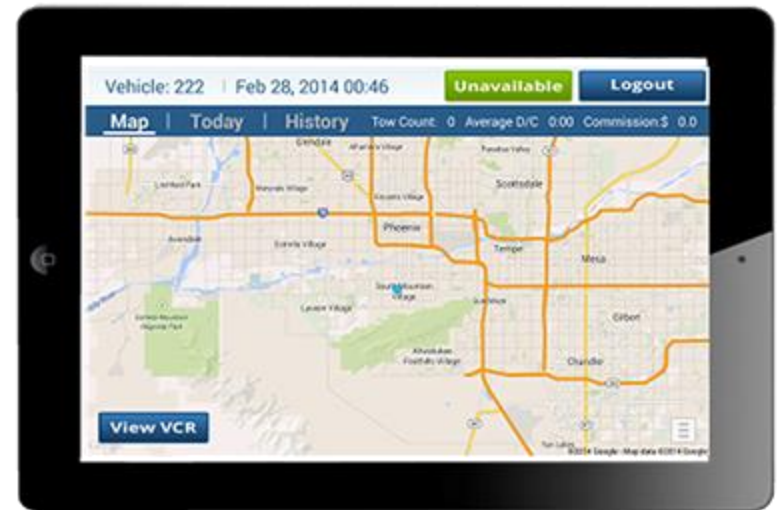

Logistics client with was struggling to deliver high quality services to its clients due to old technology and limited reporting and analytics capability.

TechMileage Solutions and Work

TechMileage created a new generation tracking and dispatch platform with mobile interface for drivers:

- Versatile mobile application provided full functionality for driver operations.
- Web interface for backend operations
- Reporting and financial integration
- Built to support iOS and Android

Product is functional and is in beta phase with one of the largest towing company in western US.

HEALTHCARE CLIENT – BUSINESS UTILITY APPLICATION

Healthcare client was struggling with sheer amount of paperwork and data entry requirements. A mobile application enabling the business operations to be completed electronically removed the data entry requirements and also expedited the business process.

TechMileage Solution and Work

After assessment and requirement gathering, TechMileage created an iPad application with following features:

- Application build to reduce paperwork and data entry
- Provides an interface to instructors to seamlessly execute the class room functions including Attendance, Walk-ins, Time accuracy and data entry
- Improved accuracy of time & data
- Native Application tightly integrated with web interface
- Used backend web services to communicate with other systems
- Build to support iOS

Product was successfully launched for instructors and business users. Cost of data entry and paperwork reduced to **Zero**.

HEALTHCARE CLIENT – SECURED MESSAGING APPLICATION

Healthcare client needed a application for secure messaging between doctors and patients. TechMileage created a HIPPA complaint mobile application with complex encryption. Application is support by Android and iOS platforms.

TechMileage Solutions and Work

TechMileage created applications to support tablets and phones. Following tasks were completed in a period of 6+ months:

- Application built for HIPAA-compliant secure communication
- Provides the ability to exchange RSA Public Keys
- Messages encrypted/decrypted on the device
- Allows to delete sent messages from recipient devices
- Provides the ability to remotely wipe the entire message store from the device, when the device is lost
- Built to support iOS and Android

Product has been successfully integrated in 10+ hospitals.
